PDF sanity checker... sanity checker.. its all very meta meta.

All of the form elements on this page should fail a test in the pdf compiler sanity check php script. Which means that you can use it to test the sanity checker itself...

This is a form element with a name that is auto_generated by Adobe.. it contains the square brackets So it should be coughed...

form_name_with[brackets]

This is a form element that is a duplicate. This happens when you merge pdf documents, normally Adobe enforces uniqueness..

original form_name_perfectly_duplicated

perfect duplicate form_name_perfectly_duplicated

original form_name_badly_duplicated

bad duplicate form_name_badly_duplicated

manually set to wrong 1.form_name_starting_with_a_1_dot_manually_set

This is a form element where I am attempting to add multiple FieldStateOptions I might be able to do this by adding a radio button with more than one option... which is not allowed for now...

is_radio_button_with_lots_of_options

○ One

○ Two

○ Three

Radio buttons with the string _date are not allowed because we compile these to date html elements

is_radio_button_with_date_in_the_name   ○ Option Button

Text fields cannot have the string is_ because we assume that this means it is checkbox or a radio button.

txt_field_with_is_in_the_name

For text fields and checkboxes, we must have tooltips... but we cannot tell for radio buttons..

txt_field_without_a_tooltip

is_checkbox_without_a_tooltip ☐ Check Box without to

is_radio_without_a_tooltip_but_no_error_generated ◯ Radio Without Tooltip

Adobe automatically generates field descriptions with dates that include things like (DD/MM/YYYY) which make no sense at all for our html form...

a_date_field_with_yyyy_in_the_tooltip

Because we will be using the form variables as smarty/php variables later, they can only have numbers, letters and underscore '_' anything else will bork the system

a_text_field_with_(%&#)_special_characters
