Checkbox Tests:

First Checkbox Here:
 It should have an _is in the variable name
 It should end in an _yes
 This and the second test serve to test my detection and parsing of _yes and _no at the end of variable names and to detect the _is automatically...

first_checkbox_is_yes

Second Checkbox Here:
 The variable name should be the same as the first checkbox
 But with a _no on the checkbox

second_checkbox_is_no

Third Checkbox Here
 The variable name should have a _is
 But it should not have a _no or a _yes in the name
 This serves to test just the _is logic without the _yes and the _no logic

third_checkbox_is_a

Radio Button Tests:

First Radio Button here:
 This should be identical in structure to the Checkbox logic above
 Create four radio buttons, with values of 1,0,true, false

first_radiobutton_is_yes

Second Radio Button here
 This should be identical in structure to the Checkbox second test above
 Create four radio buttons, with values of 1,0,true, false

second_radiobutton_is_no

Third Radio Button here
 This should be identical in structure to the Checkbox second test above
 Create four radio buttons, with values of 1,0,true, false

third_radiobutton_true_is

Fourth Radio Button test here
 This should be a series of radio buttons with plain text choices instead of "1,0,true,false" something like "choice 1, choice 2, spagetti" etc etc...

fourth_radiobutton_false_is_what

choicehere, what,   0, falsefalsefalse

Fifth Radio Test... default values for this radio button: fifth_radiobutton_is_

Yes   Off
